LIGHTING

General illumination sets the character of the spaces, giving them functionality and atmosphere.

The type of lighting installation depends on the purpose of the space, while the shape of the luminaires needs to be in accordance with the interior design. From the 'invisible' linear systems, to circular and square shapes that complement the overall interior design, the importance of good lighting should always be considered.

OFFICE LIGHTING:

Pleasant working environment, staff efficiency and ease of work are just some of the benefits of high-quality office lighting. Optimal glare-free visibility in the offices, warm and indirect in the resting areas, the illumination is carefully selected for all types of rooms within the office space.

EDUCATIONAL INSTITUTIONS:

Similar to the office lighting, educational institutions require appropriate glare-free illumination on the work plane. Long-life lighting equipment enables full use of the spaces in the long work/study hours.

LIGHTING FOR SHOPS AND SHOWROOMS:

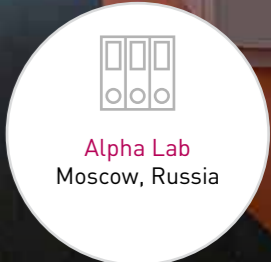

Marking the way through the shop, accentuating new arrivals and offering a great shopping experience. Playing with contrasts of illuminated goods and interior in the dark or choosing full exposure of the goods and interior depend on the brand's message.
